

Visitor Management made savvy.

Some1 streamlines visitor sign-in, and connects visitors to the hosts expecting them through one, easy-to-use visitor management App.

Time and attendance

Easily record staff time and attendance, Simply scan in and out of work. No punch cards or paper trails

No more logbooks

Say cheers to logbooks, decoding handwriting, overflowing file rooms and unwanted germs.

No tablet? No problem

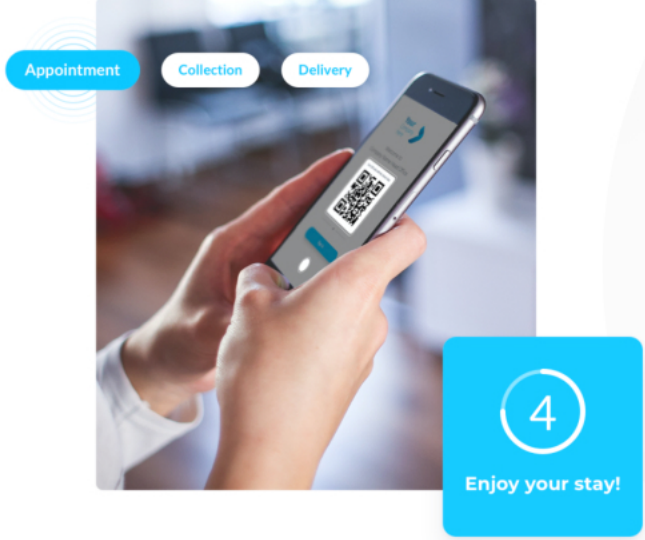

No need for fancy hardware to show guests how tech-savvy and efficient you are. Some1 is touchless.

It's good for security

Always know who's in the building and access all records securely in the Cloud.

How it Works

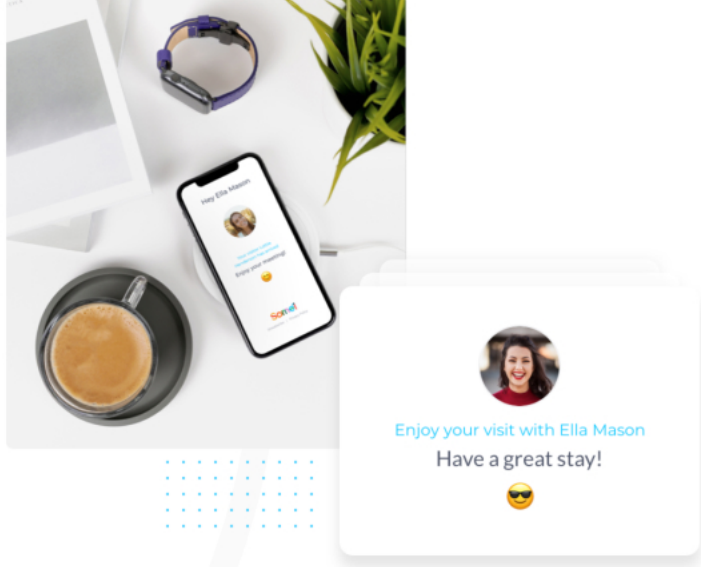

Slick and quick

Some1 offers two simple options to scan-in visitors. Whichever option you choose, guests are offered a digital NDA to protect any intellectual property inside the building.

- 1 With the Some1 mobile visitor management App, guests simply scan the QR code.
- 2 If your customers don't have the Some1 app, just check them in with your CMS.

No wait, no hassle

When a visitor scans-in at your front-desk, a notification is automatically sent to whoever they're there to see. No calls, dances or waiting required – this all happens in one simple and seamless flow. All hosts need to do is welcome their guests or collect their packages at reception.

Bye-bye paper

You've already saved a few trees by doing away with your logbook. Get ready to save a few more by using digital visitor passes. Aside from the simplicity and traceability of digital passes, it helps building security know who is in the building, at which time and for how long.

Simple download and set-up for hosts and visitors

Once Some1's software has been set up, tenants and hosts simply download the App to start managing their visitors and deliveries. Visitors can download the same visitor management App for quick access and simple scan-in to the building.

Oh yes... You can also just use your mobile's camera to scan. No app needed!

Key features

Quick Scan

Seamlessly scan-in visitors and deliveries using your unique QR code or front-desk tablet.

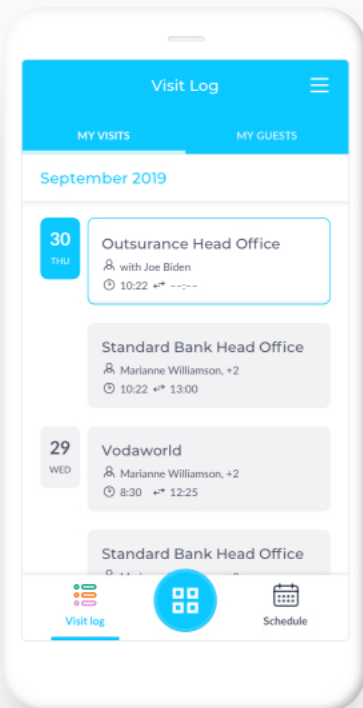

Schedule

Schedule meetings, make bookings and invite your customers to join you on Some1.

Notifications

Hosts are notified when their guests are in the building and guests are notified when their hosts have granted access.

Visiting History

All visiting and delivery history is documented and securely stored in the Cloud.

Digital Passes

Visitors receive a digital pass either via email or as a badge on their App.

Unlimited Visits

There's no limit to the number of visits, and delivery services will love the time Some1 saves them.
